Get started

Welcome to Kahoot!

Here's how to get started.

1. You'll receive an **invite** from your Kahoot! admin to join your secure team space.
2. Accept the invite, and **log in to your Kahoot! account** - only create a new Kahoot! account if you don't have an existing one already.
3. If your admin is using a **universal license key**, you'll then receive an email that will ask you to **verify your email address**, and your request will be sent to be approved.
4. Once approved, you'll be notified by email and able to login to your team space.

Creating kahoots

[← Back to table of contents](#)

Question types

When creating, you can combine different types of questions and content in one kahoot to increase engagement, stir up dynamics in the room, and improve learning outcomes.

Assessment question types:

- ▶ Multiple choice quiz questions
- ▶ True/false questions
- ▶ Puzzle
- ▶ Type answer

Polling and discussion question types:

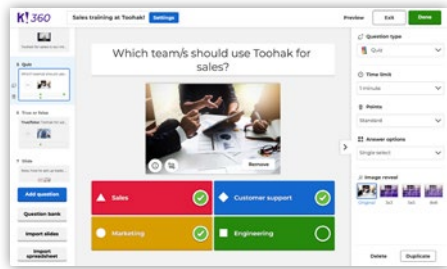

- ▶ Poll
- ▶ Word cloud
- ▶ Open-ended quiz question
- ▶ Brainstorm

Interactive presentation tools:

- ▶ Slides
- ▶ Slide importer
- ▶ Premium image library

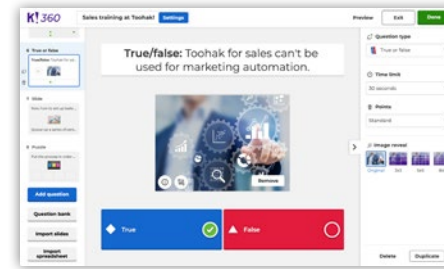

The screenshot displays the Kahoot! 360 interface for creating a quiz. On the left, there is a sidebar with a '1 Quiz' section containing a 'Type your question' input field, a '20' timer, and a trash icon. Below this are buttons for 'Add question' and 'Question bank'. At the bottom of the sidebar are 'Import slides' and 'Import spreadsheet' buttons. The main area is titled 'Entire Test knowledge' and is divided into three sections: 'Test knowledge', 'Collect opinions', and 'Present info'. The 'Test knowledge' section includes 'Quiz' (Give players several answer alternatives to choose from), 'True or false' (Let players decide if the statement is true or false), 'Type answer' (Ask players to type a short correct answer), and 'Puzzle' (Ask players to place answers in the correct order). The 'Collect opinions' section includes 'Poll' (Get players to choose from up to 4 opinions), 'Word cloud' (Collect short free-form poll responses), 'Open-ended' (Ask players to type a long free-form response), and 'Brainstorm' (Collect, discuss, and vote on ideas). The 'Present info' section includes 'Slide' (Give players more context or additional explanation). At the bottom of the main area, there are two input fields for 'Add answer 3 (optional)' and 'Add answer 4 (optional)', each with a colored square icon (brown and green respectively). A 'Delete' button is visible at the bottom right.

Assessment question types

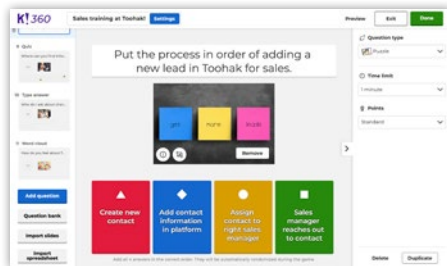

Quiz

With **quiz** questions, points are awarded for speed and accuracy. You can add up to 4 different answer options. You can also use images as answer alternatives and multi-select to raise the stakes.

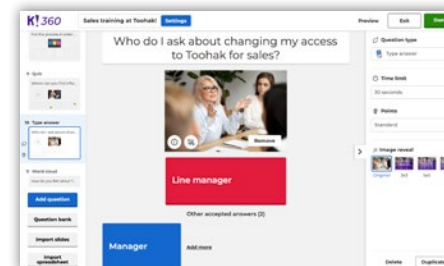

True/False

True/False questions already have the answers pre-populated. All you have to do is add a question and you're ready to go!

Puzzle

For **puzzle** questions, players put the answers into the correct order - great for deeper focus! You can use this question type to rank facts and stats or to review processes.

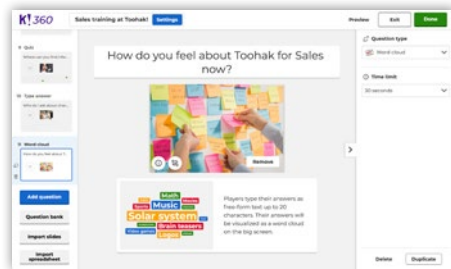

Type answer

You can test deeper knowledge of a topic with **type answer** questions. With this question type, you can ask participants to recall and type information without giving any prompts! This makes players think carefully and it minimizes guesswork! It's especially helpful in training where you need to put emphasis on specific facts, or data stats.

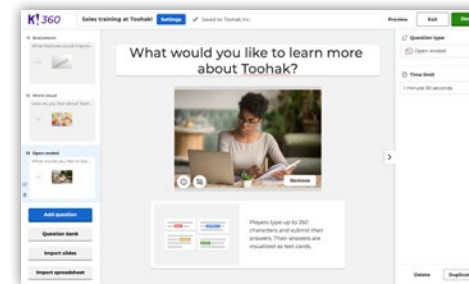

Polling and discussion question types

With **polls**, **word clouds** and **open-ended questions**, there are no right or wrong answers. Here, the players are asked to provide feedback and opinions.

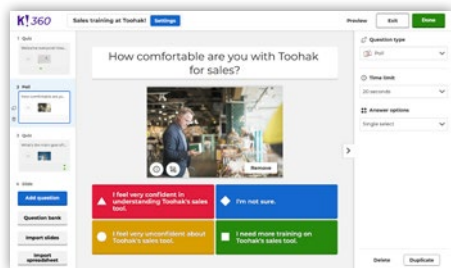

Word cloud

You can use **word clouds** to gather opinions on a specific topic, crowdsource ideas, or as an ice breaker. Players type their answer or opinion on their device and it will show on the shared screen.

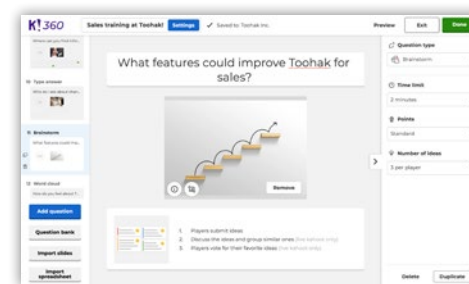

Open-ended

Open-ended questions are great for detailed feedback as participants can type a response of up to 250 characters.

Poll

Polls look similar to quiz questions, as they have 4 possible answers as well, that players can select from.

Brainstorm

With **brainstorm**, you can keep everyone engaged and energized by collecting, discussing, and voting on ideas! Spark discussions among small groups and surface great ideas during in-person and video

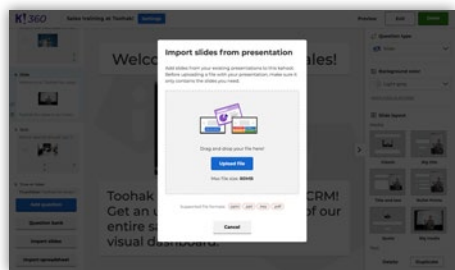

meetings, workshops, and strategy sessions. What's more, you can harness the power of large audiences by quickly crowdsourcing ideas from hundreds of participants at events. The brainstorm experience automatically adapts to the crowd size, ensuring hosts can capture large volumes of ideas while still maintaining maximum momentum during an event.

Interactive presentation tools

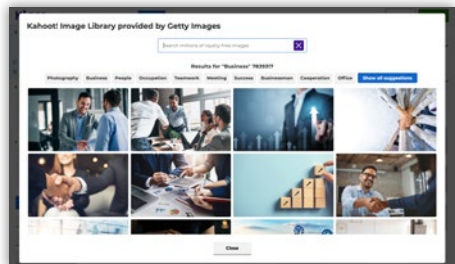

Slide

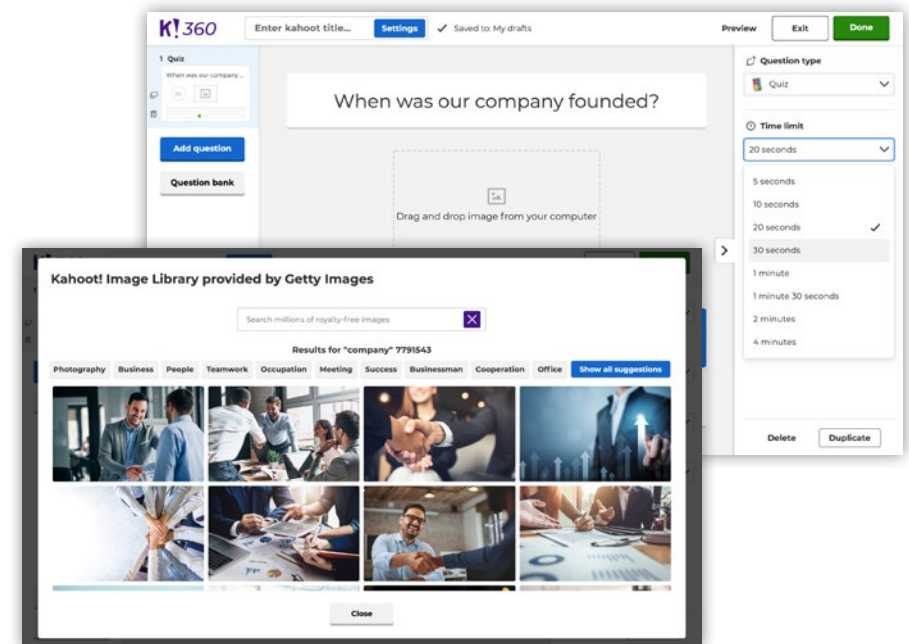

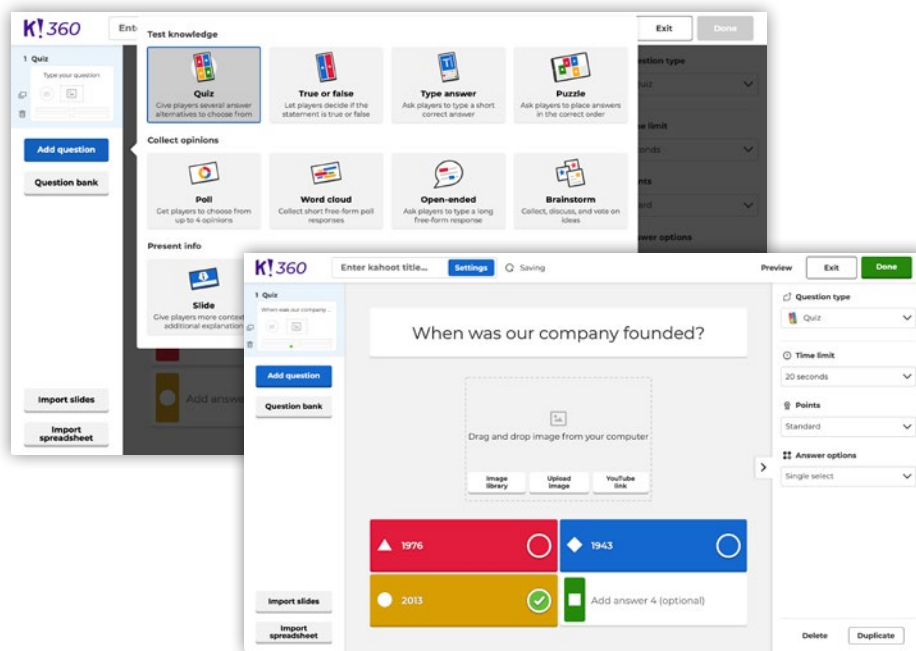

With a slide, players don't have to respond! This is a chance for you to present content, give extra information or transition into a new topic during a training session or event. Depending on your plan, you can choose from 10 slide layouts. As well as Kahoot! slides, you can create interactive presentations by importing a slide deck directly into your kahoot. The slide importer supports .ppt (PowerPoint), PDF (you can export Google Slides as PDFs), and .key (Keynote).

You can also find the perfect picture for every slide and question in a **premium image library**, which features high-quality pictures from Getty Images.

How to create in 7 simple steps

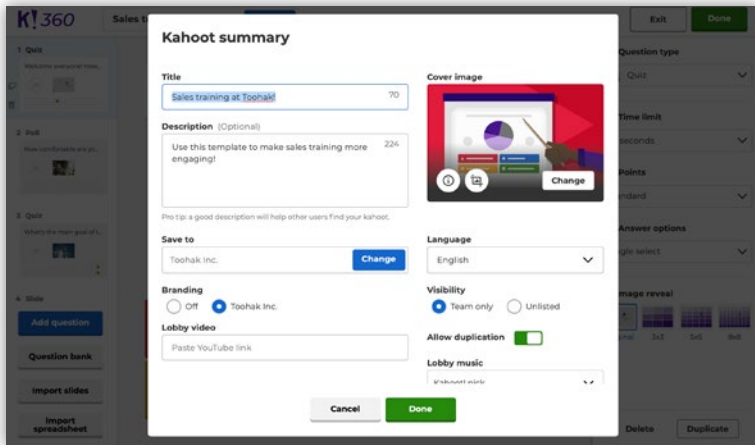

1. Click the **Create** button and choose **New kahoot**.
2. Select your **question type** and fill out the fields.
3. If adding a **quiz**, **poll**, or **puzzle** question, add answer alternatives and mark the correct answer(s) if applicable.

4. Adjust the timer and points depending on the complexity of the question.
5. Add an **image** or **video**. You can use the **built-in image library** where you can search for millions of images, or upload your own image instead. Use the image reveal feature to build anticipation - you can control the speed of how the image is revealed by choosing from the different grids.

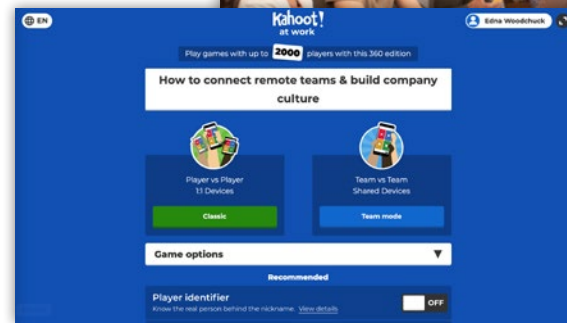

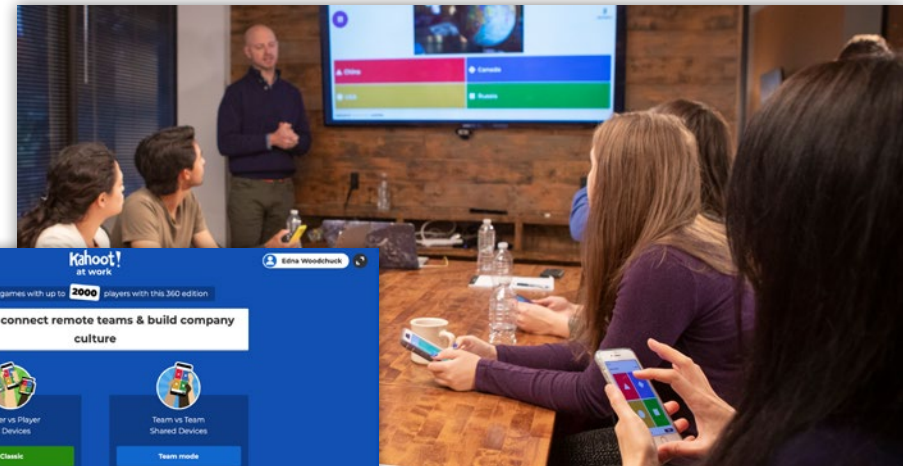

Creating kahoots

How to create

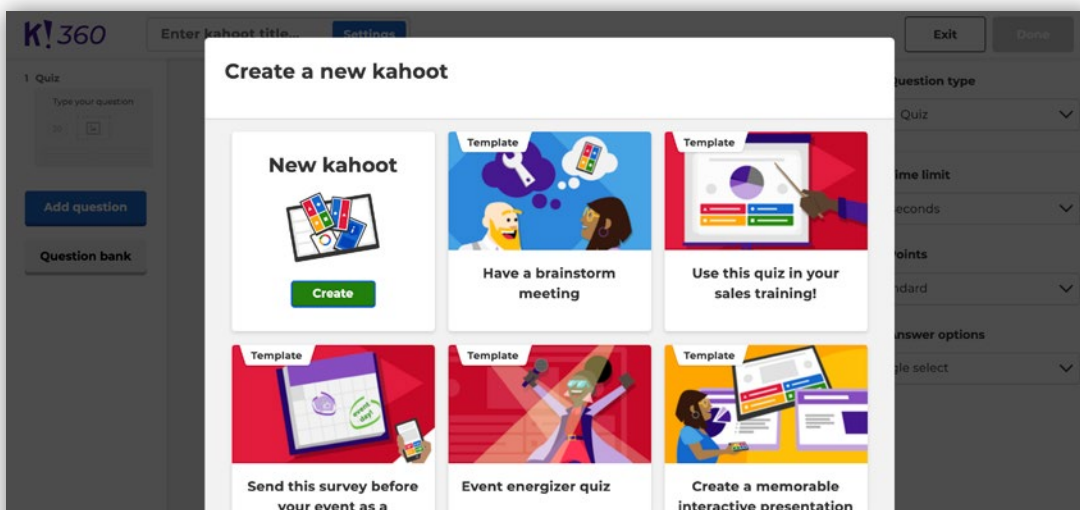

← Back to table of contents

1. Add the next question from the left-hand side.
2. Type a title for your kahoot in the **Enter kahoot title...** field, and fill in other important details in your kahoot summary.

Once you've created your kahoot, you can test drive it right away, or host it live.

Accessing pre-designed templates

If you don't have time to create your kahoot from scratch, we have lots of pre-designed templates based on common uses of Kahoot!, which you can customize to fit your needs. These include helpful tips and best practices. Just choose one when you click the **Create** button.

Playing kahoots live or as a challenge

Host your kahoot in a live setting

With Kahoot!, you can either host a game in a live setting, with players answering questions on a big screen, or, send as a self-paced challenge, where both the questions and answers appear on players' devices.

A live setting works great for in-person training sessions, events, or presentations! Questions need to be displayed on a shared screen, that is big enough for your whole audience to see.

How to host a live game

1. Click **Play** and choose **Present** followed by **Classic**.
2. The game lobby will then display a unique game **PIN** for all players to see.
3. Players use their devices, e.g. a smartphone, to join the game via **kahoot.it** or the **Kahoot! app**, by entering the **PIN** and their chosen nickname.
4. Once all players are in the game lobby, click **Start**.

Pro tip

When hosting, use the spacebar to easily move through each question!

The number of players you can have in a kahoot game depends on your Kahoot! for business subscription.

Playing kahoots

Send a challenge

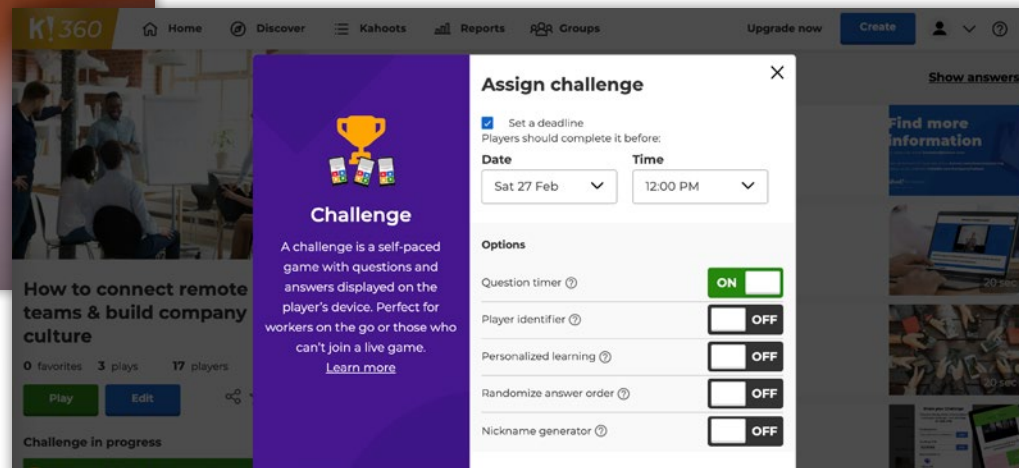

Send your kahoot as a challenge

For participants who can't be in the same place at once, to extend learning beyond a live game, or for distributed or remote teams, you can send your kahoot as a challenge instead!

This is a self-paced way to play Kahoot! with questions and answers displayed on the player's mobile device or computer. Players complete the game at their own pace, within the allocated time. Though played remotely, it's still a competition with its own leaderboard, adding some extra motivation. You can track progress in real time while the challenge is ongoing.

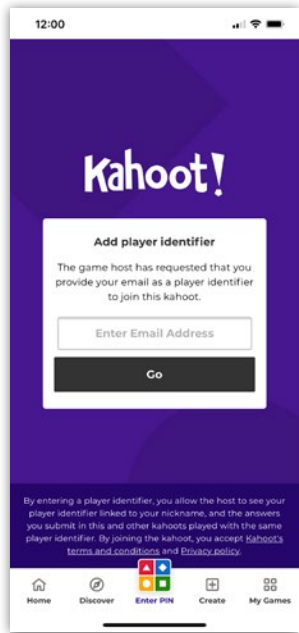

How to send a challenge

1. Open a kahoot, click the **Play** button followed by **Assign**.
2. Set the deadline by when the players should complete the challenge.
3. Copy the **challenge URL** or **PIN** and share it with your players or assign it to learners via email.
4. Players complete the challenge on their mobile devices or computers - they don't need a paid Kahoot! subscription to play.
5. Check challenge results in the **Reports** section or right in the app to check completion rate, and assess learning impact and pinpoint questions that need following up.

Playing kahoots

Player identifier and tournaments

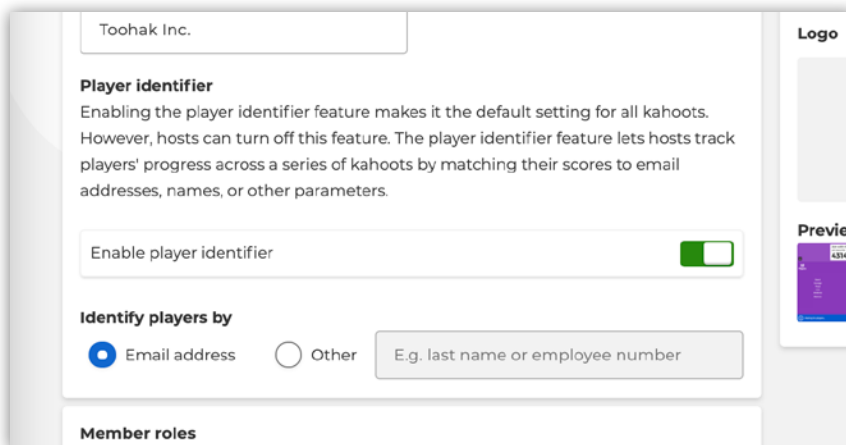

How to identify players and create a tournament

Depending on your Kahoot! for business subscription, you may have access to our player identifier and tournament features. This enables you to match player scores to emails, names, or other parameters, so you can track their answers and performance.

When joining the game, players will be asked to enter their emails or real names before entering a nickname. This will allow you to identify players and track their progress throughout multiple games.

You can then combine scores from different games into one tournament to get an overall leaderboard and final podium. This is perfect for ongoing training courses, company-wide competitions, or large events!

Data and organization

Organize your kahoots into folders

Personal folders

- ▶ Personal folders only accessible to you
- ▶ They can be created in your **Kahoots** space, **not** in your **Favorites** or **Shared with me** spaces
- ▶ You can create, rename, move, duplicate, or delete your folders

Team folders

- ▶ Team folders are accessible to everyone on your team
- ▶ Only individual team members can move their own kahoots back into a personal folder
- ▶ You can pin your favorite folders to the sidebar by clicking the three dots on a folder and selecting **Pin to sidebar**.

The screenshot displays the Kahoot! 360 dashboard. At the top, there is a navigation bar with 'Home', 'Discover', 'Kahoots', 'Reports', and 'Groups'. A 'Create' button and user profile icon are on the right. The left sidebar shows 'Courses', 'My Kahoots', 'Toohak Inc.' (4 members), 'Favorites', 'Shared with me', and 'My drafts'. The main content area is titled 'Folders (10) Create new' and shows a grid of folders: HR, Sales training, Marketing - EMEA, Marketing - LATAM, Marketing - APAC, Sales, Sales - LATAM, Sales - EMEA, and Company present... Onbo. A context menu is open over the 'Sales training' folder, listing options: Pin to sidebar, Open, Rename, Move, Duplicate, and Delete. Below the folders, there is a section for 'Kahoots (10) Create new'. The first kahoot is 'Draft change at Toohak!' by MsWoodChuckBiz, created over 1 year ago with 24 plays. It has 11 questions and is visible to the team. Below it is a kahoot titled 'Learn about Kahoot! Courses'.

Data and organization

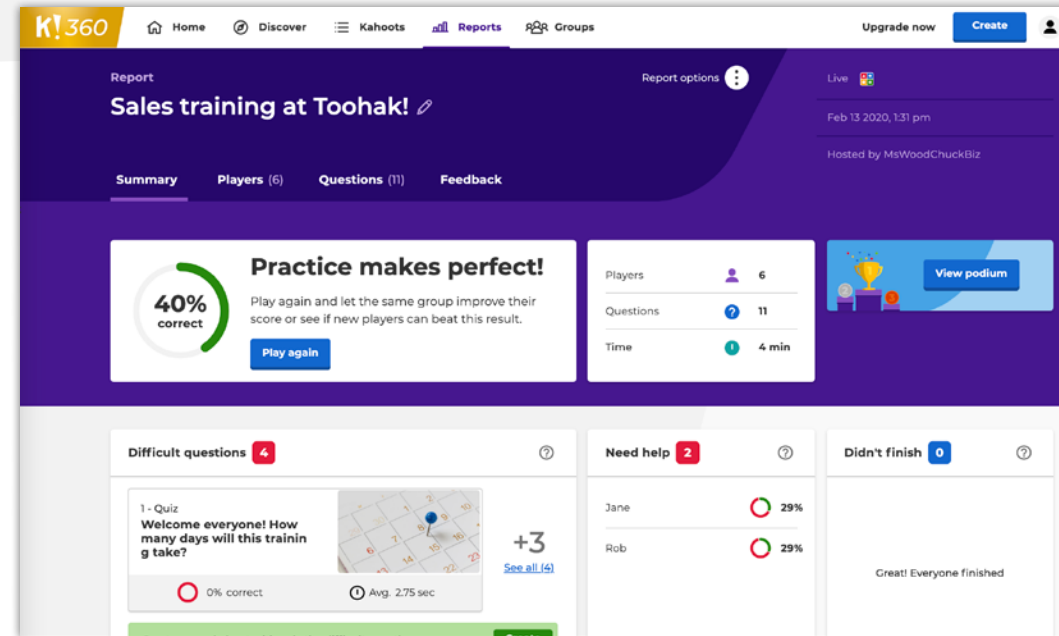

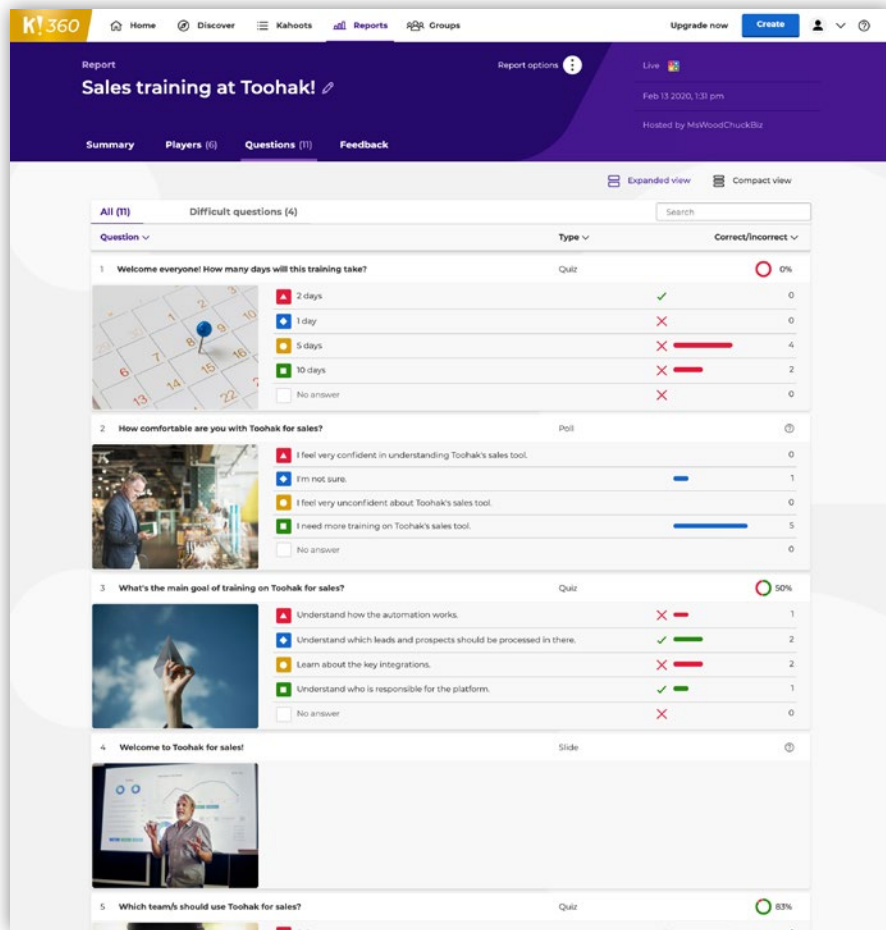

Access reports & insights

[← Back to table of contents](#)

Access reports & insights

Now you've hosted some kahoots, it's time to track what your players have really learned!

Right after hosting a live game or sharing a challenge, you can access reports and insights on game results, to assess learning impact and help you target instruction.

Reinforce difficult questions

Questions that had less than 35% participants answering correctly appear in the **Difficult questions summary**. If there were 3 or more difficult questions, you can generate a kahoot based on them and use it to reinforce learning.

Full control over challenges and reports

From a report, you can also extend a challenge deadline or end it before deadline, as well as remove players if needed.

By clicking the pencil icon next to the report name, you can rename it - this will make it easier to find the right one if you used the same kahoot in several live sessions or challenges!
